

Flight Log - Stage 2 Android QA

Bounded Stage 2 acceptance passed - 27 September 2026

Scope: PAR-47 and the shared sign-in slice of PAR-66. Wider backup/restoration/account work, cross-app accessibility (PAR-6), hosted release acceptance (PAR-10), and recorder reliability remain separate.

Final source: 28890f2ff56f4e4247ff09888b6c16bfc7de8f13

QA package: com.xxvalhallacoderxx.xcmvp.stage2qa

APK SHA-256: 8151839485aab2e5259450e4046fd41ca95405c5dc07e754eafb27311bd614f0

Device: Samsung SM-S938B; Android 16 / API 36; 1080 x 2340; density override 420. Baseline text scale 0.9; email layout checked at 1.3. Original text and accessibility settings restored. Normal app/data untouched. Purple floating overlay: existing Wispr service.

Node 24 full workflow passed: TypeScript/lint, 3 architecture checks, 130 Jest suites / 1301 tests, 71 Deno tests, 469 database assertions. Final release build passed. Preserved source maps match all 242 runtime sources at the final source commit.

Physical checks: local-only completion; Pilot sign-in route; keyboard/Back; fresh form after leaving; real fresh/returning email sign-in; wrong-code recovery; email-app round trip; saved session after cold launch; explicit Friends handoff to blank, uncreated profile fields; enlarged email/action reachability. The user confirmed clear TalkBack announcements.

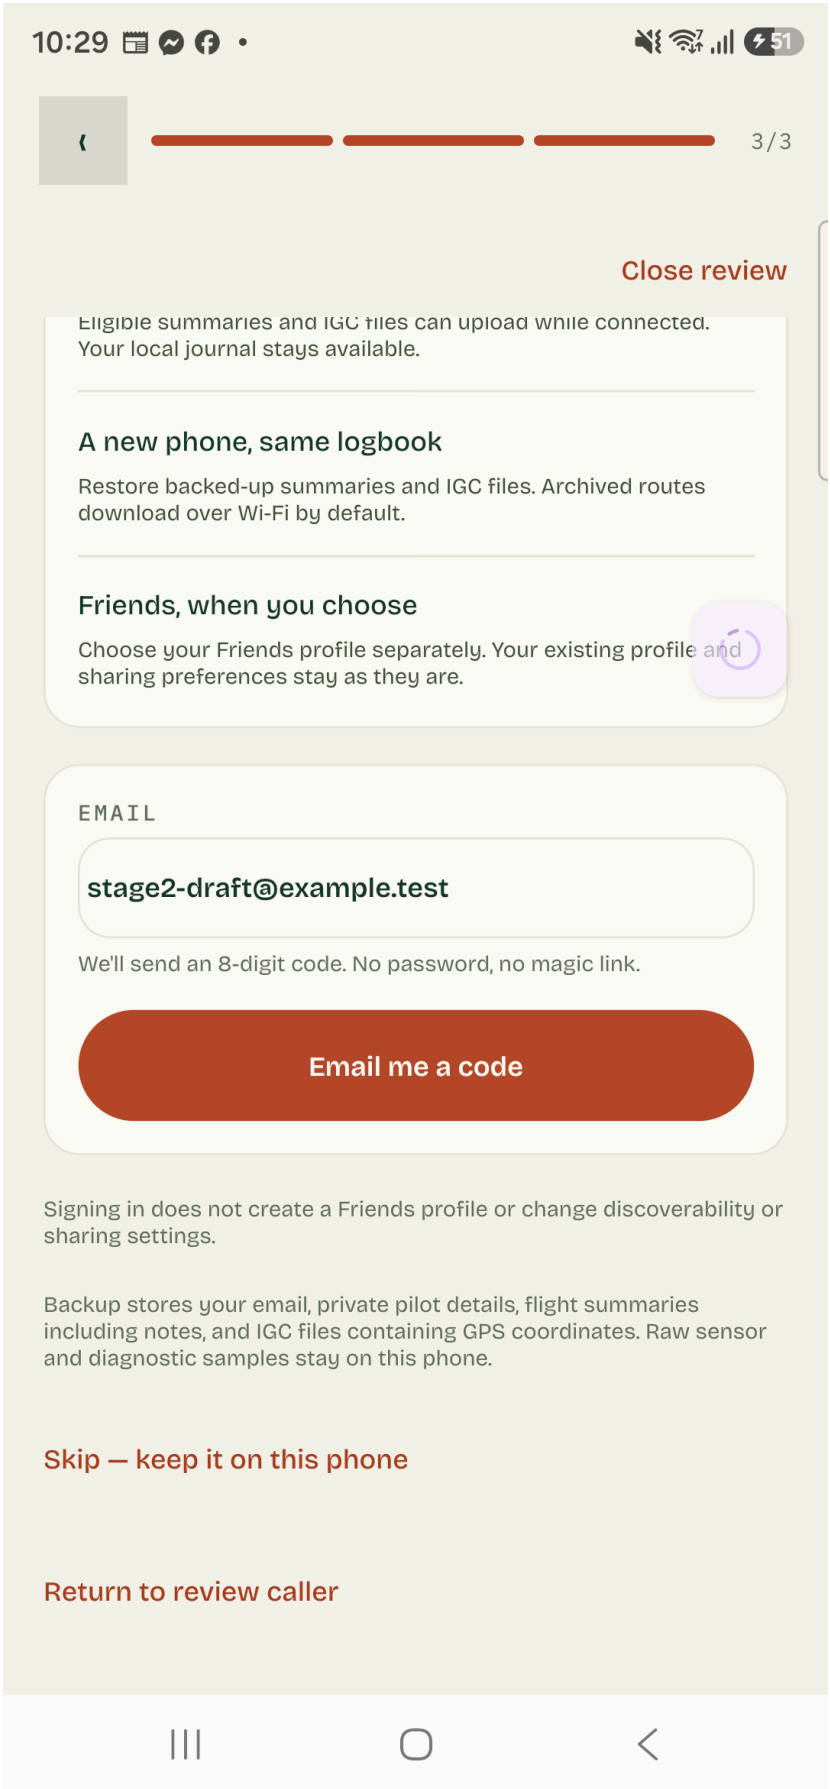

Resolved finding: initial build A navigated out of onboarding while the keyboard was open. Commit 6a20639 now dismisses the keyboard first, retaining the draft. Next Back leaves and clears sign-in. Retested on build B. Final build C also uses the plain-language Finish review action.

Pending checks: None for this bounded Stage 2 slice. Existing broader owner gates remain open.

Evidence boundaries: automated tests cover controlled offline/invalid/expired/rate-limit/late-response/save-failure states. Device evidence is not proof of recorder endurance or complete hosted backup/restoration acceptance. Enlarged-text re-entry automation did not complete its later visibility assertion; baseline-size re-entry was separately verified.

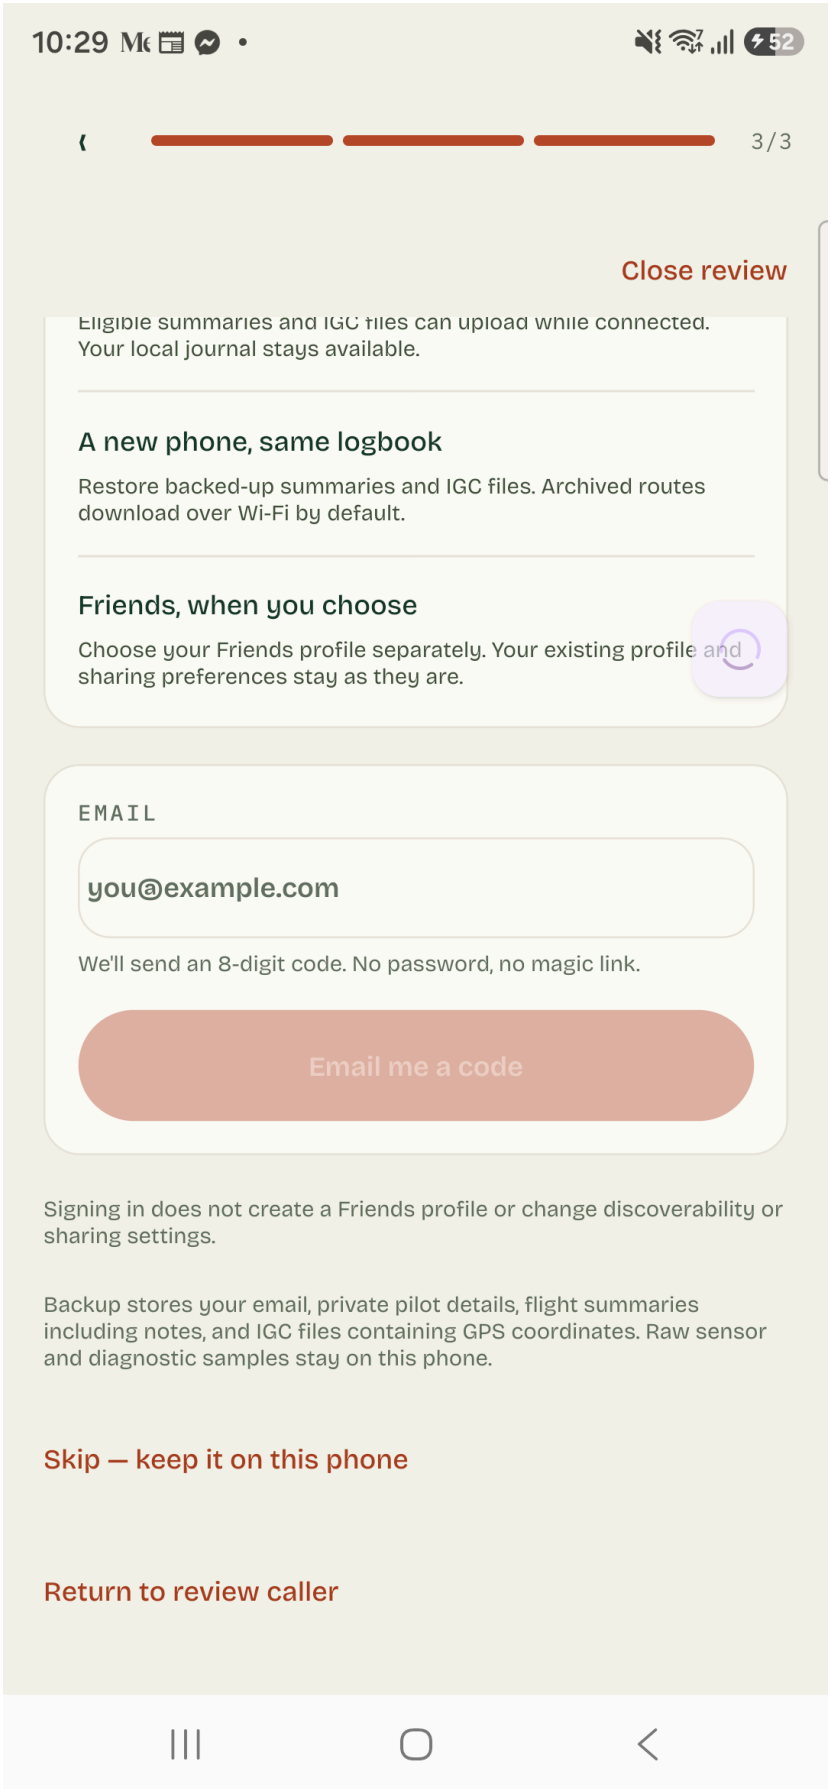

All screenshots are embedded unchanged. This shared packet uses synthetic data and omits the account-email screenshots. No real verification codes, credentials or tokens are included.

Keyboard Back fix: first Back retains Backup 3/3 and the draft.

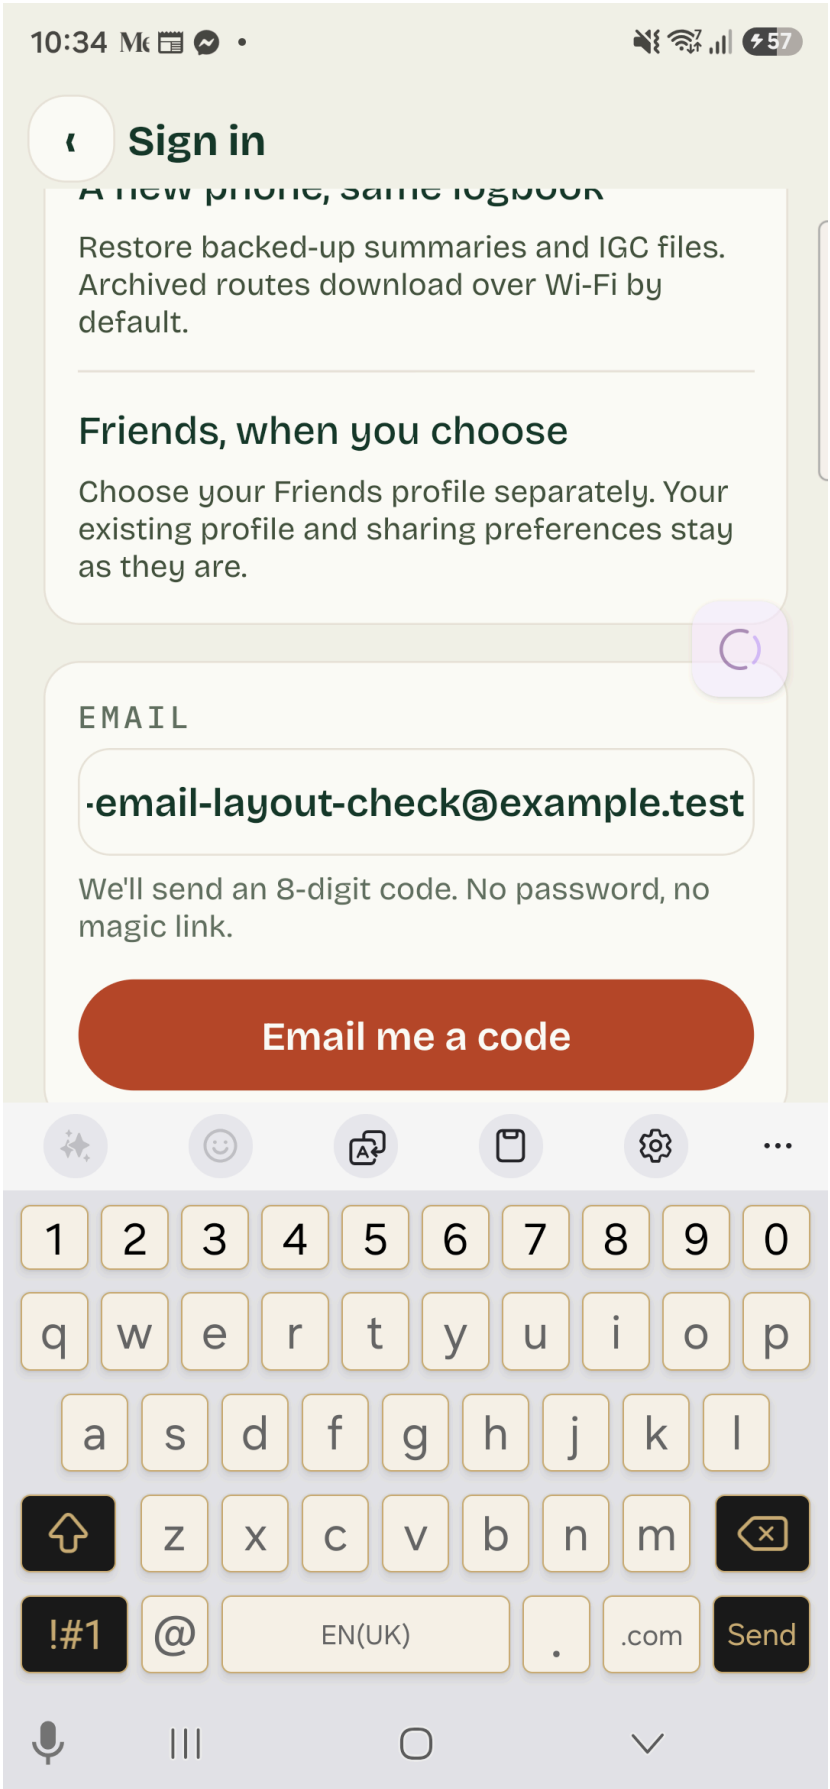

Build B / source 6a20639. The next Back returned to Permissions. The old bottom review label was changed in final build C.

Leaving and re-entering Backup starts a blank email form.

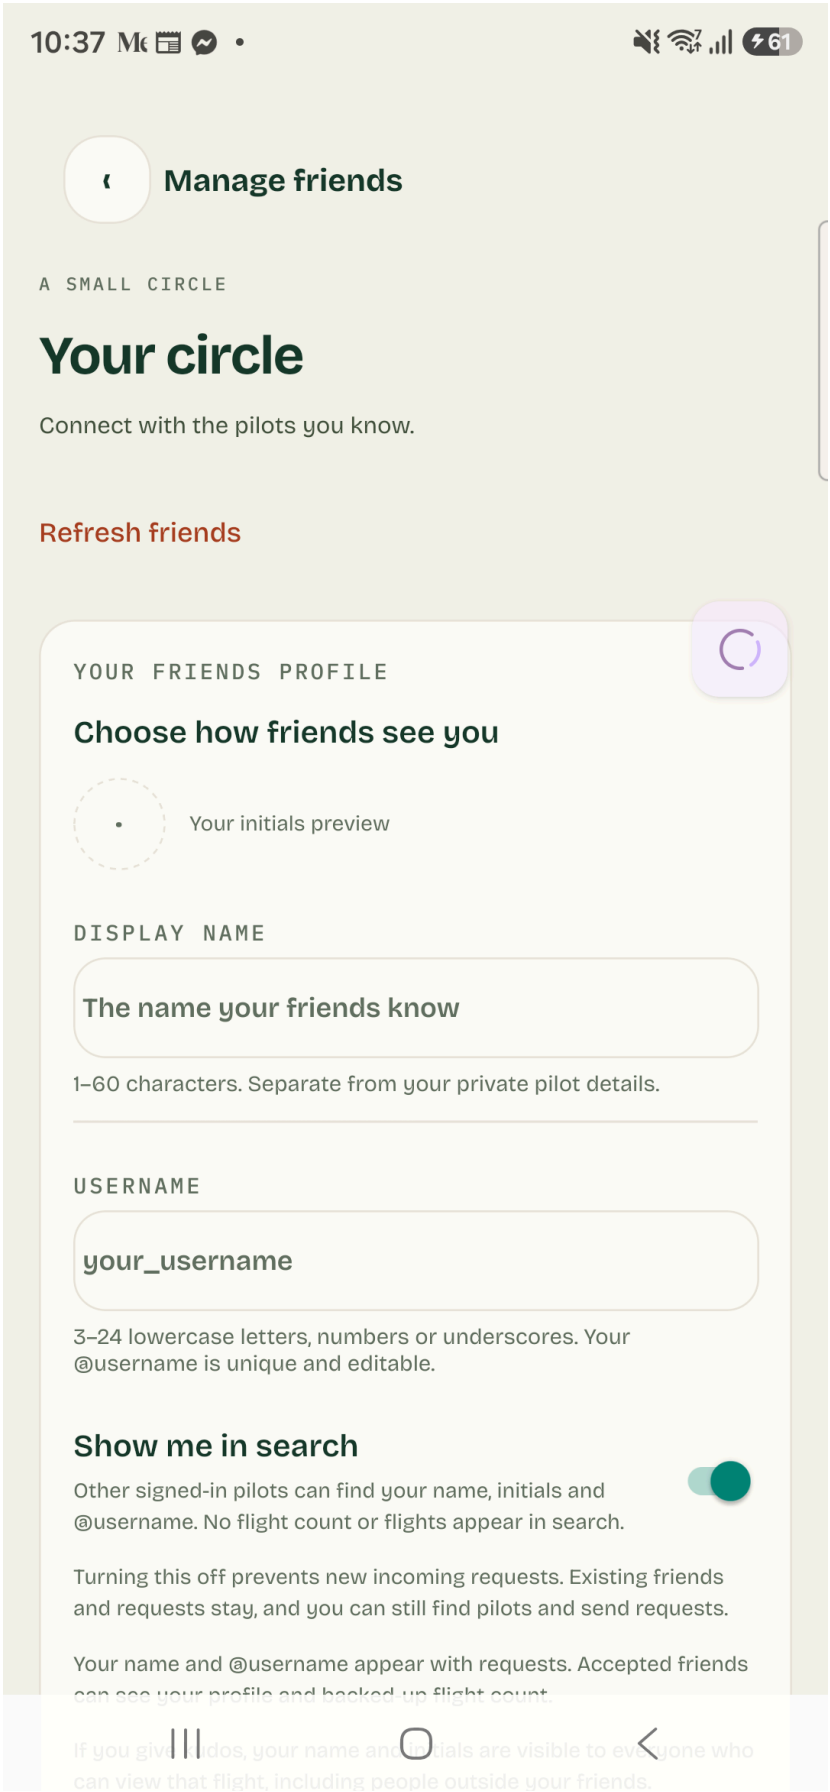

Build B / source 6a20639. Close review returned to Settings.

Enlarged text: email and primary action reachable above keyboard.

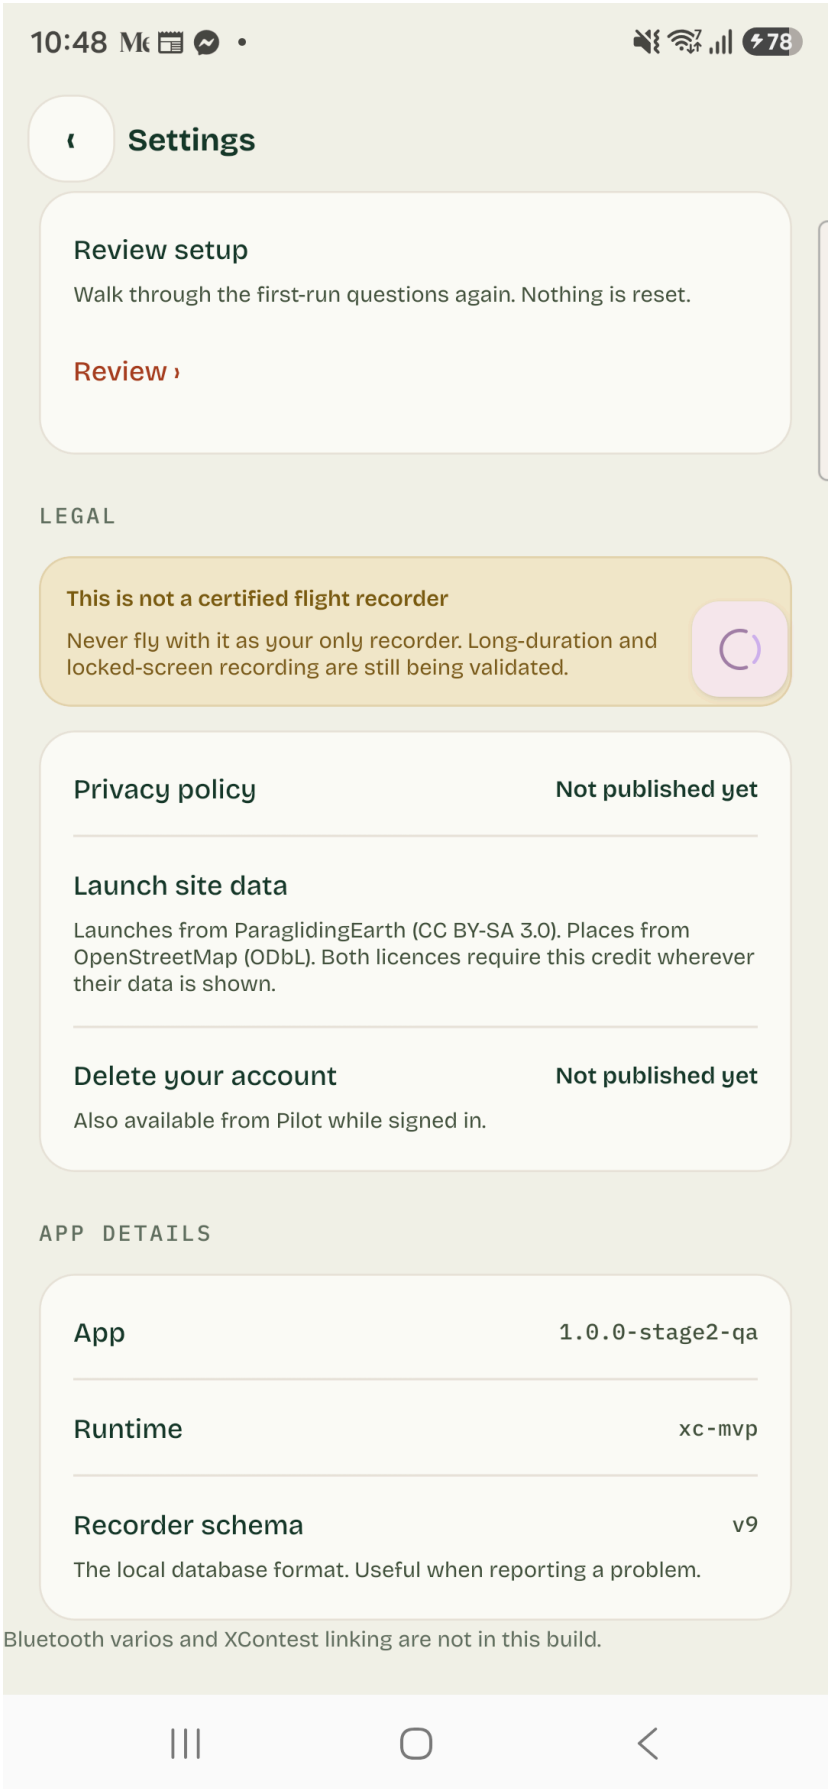

Final build C / source 28890f2; font scale 1.3. Synthetic long email scrolls horizontally; the form scrolls vertically.

Set up Friends opens the existing explicit profile flow.

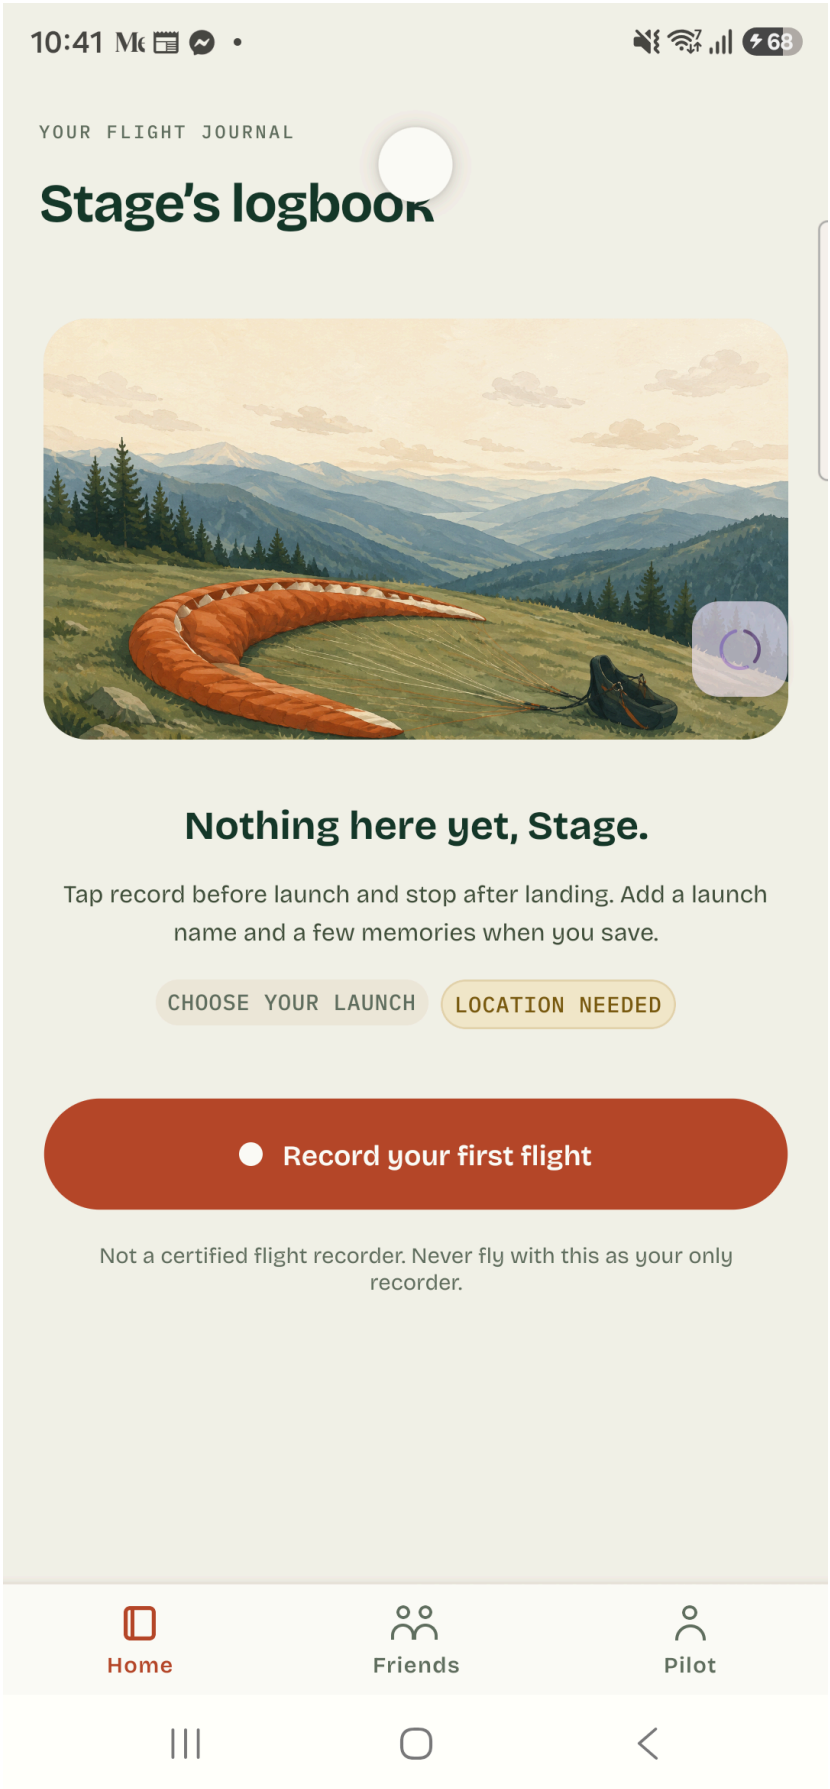

Final build C / source 28890f2. Display name and username are blank. No profile creation or preference change was performed.

Finish review returns to the original Settings caller.

Final build C / source 28890f2. User-confirmed returning sign-in at 3/3, then explicit Finish review.

Open Home completes signed-in Review and opens the journal.

Final build C / source 28890f2. Synthetic private pilot name; zero flights; no recording started.
